Abstract: This electronic document is a “live” template. The various components of your paper [title, text, heads, etc.] are already defined on the style sheet, as illustrated by the portions given in this document. The abstract should be between 200 and 400 words.

Keywords: Component, Formatting, Style, Styling, Insert

1. Introduction

This template, created in MS Word 2000/2007/2010 and saved as “Word 97-2000 & 6.0/95 – RTF” for the PC, provides authors with most of the formatting specifications needed for preparing electronic versions of their papers. All standard paper components have been specified for three reasons: (1) ease of use when formatting individual papers, (2) automatic compliance to electronic requirements that facilitate the concurrent or later production of electronic products, and (3) conformity of style throughout a journal publication. Margins, column widths, line spacing, and type styles are built-in; examples of the type styles are provided throughout this document. Some components, such as multi-leveled equations, graphics, and tables are not prescribed, although the various table text styles are provided. The for matter will need to create these components, incorporating the applicable criteria that follow.

2. Custom Title

(SciencePG-Level1-Multiple-line)

2.1. SciencePG-Level2-Single-line

First, confirm that you have the correct template for your paper size. This template has been tailored for output on the A4 paper size.

2.2. SciencePG-Level2-Single-line

The template is used to format your paper and style the text. All margins, column widths, line spaces, and text fonts are prescribed, please do not alter them. You may note peculiarities. For example, the head margin in this template measures proportionately more than is customary. This measurement and others are deliberate, using specifications that anticipate your paper as one part of the entire publication, and not as an independent document. Please do not revise any of the current designations.

2.2.1. SciencePG-Level3-Single-line

Before you begin to format your paper, first write and save the content as a separate text file. Keep your text and graphic files separate until after the text has been formatted and styled. Do not use hard tabs, and limit use of hard returns to only one return at the end of a paragraph. Do not add any kind of pagination anywhere in the paper. Do not number text heads-the template will do that for you.

2.2.2. Abbreviations (SciencePG-Level3-Single-line)

Define abbreviations and acronyms the first time they are mentioned in the abstract. Abbreviations such as IEEE, SI, MKS, CGS, sc, dc, and rms do not have to be defined. Do not use abbreviations in the title or heads unless they are unavoidable.

Commented [Admin9]: The main text should be clearly paragraphed.
2.2.3. Equations (SciencePG-Level3-Single-line)

The equations are an exception to the prescribed specifications of this template. You will need to determine whether or not your equation should be typed using either the Times New Roman or the Symbol font (please no other font). To create multileveled equations, it may be necessary to treat the equation as a graphic and insert it into the text after your paper is styled.

Equation numbers, within parentheses, are to position flush right, as in (1), using a right tab stop. To make your equations more compact, you may use the solidus (/), the exp function, or appropriate exponents. Italicize Roman symbols for quantities and variables, but not Greek symbols. Use a long dash rather than a hyphen for a minus sign. Punctuate quantities and variables—beginning of a sentence. As an example, write the quantity $3 \cdot 10^2$ rather than $3 \times 10^2$ before or immediately following the equation. Use " (1)", not "Eq. (1)" or "equation (1)", except at the beginning of a sentence: “Equation (1) is . . .”

\[ X + Y = Z \quad (1) \]
\[ X \cdot Y = R \quad (2) \]

Note that the equation is centered using a center tab stop. Be sure that the symbols in your equation have been defined before or immediately following the equation. Use “(1)”, not “Eq. (1)” or “equation (1)”, except at the beginning of a sentence: “Equation (1) is . . .”

3.1. Figure (SciencePG-Level2-Single-line)

Figure is as follows: Place figures and tables at the top and bottom of columns. Avoid placing them in the middle of columns. Large figures and tables may span across both columns. Figure captions should be below the figures; table heads should appear above the tables. Insert figures and tables after they are cited in the text. Use the “Figure 1”, even at the beginning of a sentence.

(a) (b) (c)

Figure 1. The caption of the figure

3.2. Table (SciencePG-Level2-Single-line)

Table is as follows: Use words rather than symbols or abbreviations when writing Figure axis labels to avoid confusing the reader. As an example, write the quantity “Magnetization”, or “Magnetization, M”, not just “M”.

<table>
<thead>
<tr>
<th>Column1</th>
<th>Column2</th>
</tr>
</thead>
<tbody>
<tr>
<td>Row 1</td>
<td>Row 1</td>
</tr>
<tr>
<td>Row 2</td>
<td>Row 2</td>
</tr>
<tr>
<td>Row 3</td>
<td>Row 3</td>

<tr>
<td>Row 6</td>
<td>Row 6</td>
</tr>
<tr>
<td>Row 7</td>
<td>Row 7</td>
</tr>
</tbody>
</table>

The example for this table.

4. SciencePG-Level1-Single-line

After the text edit has been completed, the paper is ready for the template. Duplicate the template file by using the Save As command, and use the naming convention prescribed by your conference for the name of your paper. In this newly created file, highlight all of the contents and import your prepared text down window on the left of the MS Word Formatting toolbar.

5. Reference

The template will number citations consecutively within brackets [1]. The sentence punctuation follows the bracket [2]. Refer simply to the reference number, as in [3]—do not use “Ref. [3]” or “reference [3]” except at the beginning of a sentence: “Reference [3] was the first . . .”

Number footnotes separately in superscripts. Place the actual footnote at the bottom of the column in which it was cited. Do not put footnotes in the reference list. Use letters for table footnotes.

Unless there are six authors or more give all authors’ names; do not use “et al.”. Papers that have not been published, even if they have been submitted for publication, should be cited as “unpublished” [4]. Papers that have been accepted for publication should be cited as “in press” [5]. Capitalize only the first word in a paper title, except for proper nouns and element symbols.

For papers published in translation journals, please give the English citation first, followed by the original foreign-language citation [6].

<table>

<tr>
<td>Cell 41</td>
<td>Cell 42</td>
<td>Cell 43</td>
<td>Cell 44</td>
<td>Cell 45</td>
</tr>
</tbody>
</table>

The example for this table.

If the square-shaped pixel size in our images was 8 × 8 screen-pixels, this amounted to about 21 pixels per face quantization (an equivalent of about 10.5 cycles/pixel). With this level of image detail, all three basic varieties of configural information (range of spatial quantization between 11 pixels/face and 6 pixels/face levels altogether indicate that this
ERP component is especially sensitive to the first-order configural cues. Some other works have supported both of these ideas [6, 16, 25].

Acknowledgements

You as the author are free to decide whether to include acknowledgments or not. Usually, the acknowledgments section includes the names of people who in some way contributed to the work, but do not fit the criteria to be listed as the authors. This section of your manuscript can also include information about funding sources.

References

Commented [A14]:
1) There should be no pictures or formulas in the reference.
2) Please list at least 15 references.
3) The reference should be numbered in the unified form, such as [1], [2], [3] and so on.
